ECG Report Evaluation Summary

Reference pool (RTLP English translations, validated_by_human, placeholders excluded): 12040 records (of 16247 RTLP-covered, 239 excluded as placeholders). Records evaluated in this run: 30.

Aggregate scores (mean)

BLEU	ROUGE-1	ROUGE-2	ROUGE-L	BERTScore F1
0.80	0.055	0.005	0.044	0.708

Note: BLEU/ROUGE compare exact surface-form overlap with a much shorter, telegraphic reference report; BERTScore (semantic similarity) should be weighted more heavily - see evaluation_interpretation.md for the full caveat.

Worst-scoring records (by BERTScore F1)

record_id	BERTScore F1	Generated text	Reference report
13416_lr	0.655	The ECG analysis revealed a duration of 10 seconds, with an estimated mean heart rate of 69.5 bpm and a standard deviation of 1.2 bpm. The RR interval had a mean of 863.6 ms and a standard deviation of 14.9 ms. The QRS complex was detected 12 times, with a mean duration of 70.8 ms and a standard dev	sinus rhythm a-v block i left type
13896_lr	0.660	The ECG analysis shows a duration of 10 seconds, with an estimated mean heart rate of 90.7 bpm and a standard deviation of 1.5 bpm. The RR interval has a mean of 661.4 ms and a standard deviation of 11.2 ms. QRS complexes were detected in 15 instances, with a mean duration of 52.7ms and a standard d	sinus rhythm left electric shaft non-specific t-change
10220_lr	0.665	The ECG analysis indicates a normal rhythm with an estimated heart rate of 64.8 bpm, based on a trace lasting 10 seconds and 10 detected QRS complexes. The mean RR interval was 926.7 ms, with a standard deviation of 18.9 ms, and the mean QRS duration was 58.0 ms, with a standard deviation of 15.4 ms	sinusrhythm normal ekg
14453_lr	0.673	The ECG analysis reveals a duration of 10 seconds, with 12 QRS complexes detected at an estimated mean heart rate of 69.5 bpm and a standard deviation of 1.9 bpm. The RR interval has a mean of 863.6 ms and a standard deviation of 23.8 ms, with a mean QRS duration of 91.7ms and a standard deviation o	sinus rhythm position type normal left hypertrophy possibly pathological
16116_lr	0.674	The ECG shows regular rhythm with a mean heart rate of 69.8 bpm and an estimated duration of 10 seconds. The QRS complexes are detected in 12 instances, the mean RR interval is 860ms, and the standard deviation is 28.3 ms. The mean QRS duration is 139.2ms with a std of 45.4ms. There's no indication	sinus rhythm nonspecific intraventricular block

Best-scoring records (by BERTScore F1)

record_id	BERTScore F1	Generated text	Reference report
19661_lr	0.748	The ECG shows a regular sinus rhythm with a heart rate of approximately 50.9 bpm and an estimated RR interval of 1180 ms. The mean QRS duration is around 85.6 ms, with a standard deviation of 31.3 ms. Bradycardia is suspected based on the low heart rate.	sinus rhythm location type normal qrs (t) abnormal inferior infarct probably old

13486_lr	0.747	The ECG analysis indicates a heart rate of approximately 108 bpm with some variability. The QRS duration is around 98 ms and regular rhythm with normal sinus rhythm. The patient presented for 10 seconds.	supraventricular extrasystole (s) sinus tachycardia location type normal otherwise normal ekg 4.46 unconfirmed report
08686_lr	0.746	The ECG analysis indicates a duration of 10 seconds with 11 QRS complexes detected, resulting in an estimated mean heart rate of 81.6 bpm. The RR interval is irregular and the coefficient of variation (CV) is 0.52. Mean QRS duration is 143.6ms and standard deviation is 38.4ms.	rhythm is atrial tachycardia (rate = 190/min) with variable av block. premature ventricular contraction(s). non-specific intraventricular block.
04147_lr	0.744	The ECG shows a regular rhythm with an estimated heart rate of 63 bpm, indicated by 11 QRS complexes over a duration of 10 seconds, with a mean RR interval of 952 ms and standard deviation of 35.2 ms. The average QRS duration is 60 ms with a standard deviation of 34.9 ms. There are no irregularities	sinus rhythm. prolonged pr interval. otherwise normal ecg.
03908_lr	0.740	The ECG analysis indicates a heart rate of approximately 54 bpm, with an irregular rhythm and normal sinus rhythm. The duration of the ECG trace is about 10 seconds, and there are nine detected QRS complexes. The mean RR interval is 1107.5 ms.	sinus rhythm t -change, such as in high lateral myocardial infarction
